The Aero 12 is designed for use as a multi-box line array in mid-sized live events where rapid deployment, precise coverage and high power are required.

The easily portable and rugged enclosure is manufactured using Birch Plywood and finished with a durable black paint. The Aero 12's trapezoidal shape and rear located splay angle adjusters keep the front spacing between adjacent elements the same, for improved line array performance.

The captive rigging system splay angles range from 0º to 10º in 0.5º increments from 0º to 3º and 1º increments from 3º to 10º allowing a wide range of column curvatures to be accomplished.

The loudspeaker components of the Aero 12 include a 12LN4C, 12” cone transducer and one M-75N neodymium compression driver with 3” titanium diaphragm. The driver is attached to a BPS-9010 aluminium wave-guide horn assembly.

**Technical Specifications**

- **Nominal Power:** 400 W
- **On-axis Frequency Range:** 62 Hz - 22 kHz
- **Nominal Impedance:** 8 Ohms
- **Minimum Impedance:** 7.4 Ohms @ 140 Hz
- **On-axis Sensitivity 1W/1m:** 81.4 dB
- **Rated Peak SPL at Full Power:** 107 dB
- **Enclosure Material:** Birch Plywood
- **Dimensions:** 31.6 x 68.8 x 38.5 cm
- **Net Weight:** 27 kg (59.5 lb)
- **Optional Accessories:** AX-aero12 Rigging Grid, AX-Combo12 Rigging Adapter, PL-12S Steel Transporting Dolly

**EN54-24 Based Technical Specifications**

- **Nominal Power:** 250 W
- **On-axis Frequency Range:** 62 Hz - 22 kHz
- **Nominal Impedance:** 8 Ohms
- **Minimum Impedance:** 7.4 Ohms @ 140 Hz
- **On-axis Sensitivity 1W/1m:** 81.4 dB
- **Measured Maximum SPL at 4m:** 107 dB
- **Horizontal Coverage Angles:** 500Hz, 132°; 1kHz, 91°; 2kHz, 95°; 4kHz, 91°
- **Vertical Coverage Angles:** 500Hz, 144°; 1kHz, 84°; 2kHz, 40°; 4kHz, 20°
- **Enclosure Material:** Birch Plywood
- **Dimensions:** 31.6 x 68.8 x 38.5 cm
- **Net Weight:** 27 kg (59.5 lb)
- **Optional Accessories:** AX-aero12 Rigging Grid, AX-Combo12 Rigging Adapter, PL-12S Steel Transporting Dolly

**Notes:**

- *Based on a 2 hour test using a 6dB crest factor pink noise signal.
- *Conventionally, 3dB higher than RMS measure, although this already utilizes a program signal.
- *Corresponds to the signal crests for the test described in *.

---

**Warning:**

- Sensitivity and Max SPL measured using a 6dB crest factor pink noise, averaged from 100Hz to 10kHz in 1/3 Octave bands.
- Coverage measured from 50Hz to 4kHz in Octave bands.
- Obtained by integration over a period of at least 30s.
Frequency Response

Shows the frequency response at 4 m of a unit radiating to an anechoic environment (4q) and driven by a 1 W (2,83 V) swept sine signal, and impedance curve. For better detail, only light smoothing (1/12th Octave) has been used. Red curve, without EQ. Black curve, equalised as per EQ shown in the Technical Specifications chart.

Distortion

Shows the Second Harmonic Distortion (grey) and Third Harmonic Distortion (dotted) curves (rised 20dB for clarity) for a unit driven at 10% of its RMS Power handling.

Directivity

Shows normalized horizontal isobar plot.

Directivity

Shows normalized vertical isobar plot.

Polar Response

1/3 octave band horizontal (left) and vertical (right) polars for the indicated frequencies. Full scale is 30dB, 6dB per division.

NOTES: Frequency response measured at 4m (13,12ft). For better detail, only light smoothing (1/12th octave) has been used. Polars were acquired by placing the unit on a computer controlled turntable inside a 300 m³ (10594 ft³) anechoic chamber. Measurement distance is 4m (13,12ft).

Reference Axis: Axis is on the centre of the grille surface and perpendicular to the grille surface.

Reference plane: Plane is on the grille surface and perpendicular to the reference axis.

Horizontal plane: Plane is containing the reference axis and perpendicular to the reference plane.
