SPECIFICATIONS

G7 GAMING CHAIR

SKYDEX Innovation

SKYDEX technology inside every G7 Gaming Chair uses engineered geometries to better distribute seated pressure. Conforming to the user's shape with gradual compression, it offers enhanced comfort throughout the day.

Ultra Arm Adjustability

BodyBilt's height-adjustable 4-Arms provide both ergonomic adjustment and stability.

Sturdy Steel Construction

From the heavy-duty cylinder to the reinforced steel brace bars and additional steel plate, G7 Gaming Chair is designed for long-term intensive use durability.

Dynamic Tensioning for Optimal Support

The lower back requires a more firm support, while the shoulders do not. Traditional mesh chairs offer a uniform tension in the mesh across the entire back of their chairs.

Comfortable Breathable Elastomeric Mesh Back

Multi-Directional Elastomeric flocked mesh alternates support providing maximum comfort.

Adjustable Arms

The G7's sleek ULTRA Arms have a space-saving design that gives you the agility you need in your gaming space.

Comfortable Contoured Seat

The minimally-contoured BodyBilt seat fits 90% of seated gamers and provides more surface area for contact.

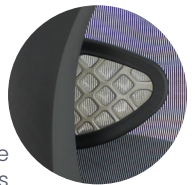

High Back Design for Greater Shoulder Support

Sleek design allows freedom of motion. As you recline or reach, the frame doesn't impede or hit the worker's arm or shoulder.

Aircell Lumbar

Never before in a chair, the G7's Air Cell Technology lumbar support allows for both compression and support of the lower back. It perfectly balances airflow and a glove-like fit to ensure premium ergonomic comfort.

Gaming Chair Casters

Made for movement, the casters on BodyBilt's G7 chair give it that final look of being ready for action. They also provide the smooth rolling that you need in your gaming chair.
