

High Pressure Series Muffler with Relief Valve NPT

Description

High pressure mufflers are designed to reduce exhaust noise in pneumatic systems while maintaining reliable performance in demanding industrial environments. Built for durability and consistent operation, they are suitable for applications where dependable noise control, efficient airflow, and long service life are required. Their robust design helps create a quieter and safer working environment, making them ideal for a wide range of compressed air and pneumatic installations.

Specification

Flow Rate (m3/h)	800
Material (Body)	Aluminium
Material (Disseminator)	Cellulose fiber / Steel
Material (Tie Rods and Lock Nuts)	Steel
Pressure (Bar)	35
Silencing Effect (db)	Up to 85%
Connection Size	1 inch

Features

- ✓ Reduces exhaust noise in pneumatic and compressed air systems
- ✓ Suitable for high pressure applications
- ✓ Durable construction for reliable performance in industrial environments
- ✓ Helps maintain efficient airflow with minimal back pressure
- ✓ Compact design for easy installation in restricted spaces
- ✓ Low maintenance design for long service life

Applications

- ✓ Pneumatic valves and control systems
- ✓ Compressed air exhaust outlets
- ✓ Air cylinders and actuators
- ✓ Industrial automation and machinery
- ✓ Manufacturing and processing equipment
- ✓ General high pressure pneumatic systems

ULTRAMAX
