Gravity

German Engineering

The new Gravity sink has an avant-garde design that optimises the bowl's **capacity** thanks to the intelligent location of the overflow in the drainer. Every detail has been carefully **designed** by German engineers in order to maximise its capability.

The design of the drainer lets the water flow in a better way - towards the overflow - preventing it from collecting on its surface or on the worktop, and restricting the spread of bacteria that can build up because of water accumulation.

INOX
18/10

High quality stainless steel

AISI 304 stainless steel provides greater hygiene for your kitchen by keeping bacteria and germs away. This metal has less adherence to dirt and external agents, and is also a neutral material for food as it does not alter its flavour and prevents odours.

Lifetime warranty

More than 90 years of experience in the manufacture of sinks allows us to offer the best guarantee.

Teka sinks are characterised by their maximum quality, durability, and extreme resistance. That is why we offer sinks with an unlimited lifetime guarantee on all our stainless steel models.
