

We introduce you to the combination of appliances that will enhance your daily life, with the latest technology and large capacity for your food and wine.

BUILT-IN STATE-OF-THE-ART WINE COOLER

The fridge incorporates a cutting-edge wine cooler to always maintain your wine at the ideal drinking temperature.

3 IN 1

With three appliances in one: a large-capacity fridge and cooler (548 L) with a wine cooler for 18 bottles.

RLF 85950 GBK

Dimensions (height x width x depth)	1830 mm x 911 mm x 706 mm
Cooling technology	LongLife No Frost
Total volume (L)	548
Energy efficiency class	E
Inverter motor	✓
Finish	Cristal Negro
Metal Cooling	✓
Display on door	✓
Climate class	SN/N/ST
Integrated handle	✓
Fast freezing and cooling button	✓
Vegetables drawers	1
Multipurpose drawer	✓
Drawers with humidity control	✓
On holidays function	✓
Ice dispenser	✓
Inner light	LED
90° opening door	✓
Ice tray	1
Annual consumption (kWh/year)	327

NEW FRIDGE WITH WINE COOLER

The perfect pairing

# DESIGN FOR THE MOST DEMANDING

## Elegant on the outside, efficient in the inside

The high-efficiency **inverter motor** is quieter and consumes less energy, thanks to its reduced friction while performing. The motor is designed and manufactured to be more durable and eco-friendly.

## The highest quality inside

Designed to renew and purify the air in the wine cellar constantly, the active carbon filter helps achieve the optimal environment for preserving the wine.

## Guarantee savings

Save energy and space by opening only the wine cooler door to get your bottle of wine, instead of opening the fridge door.

## More capacity

The integrated **ice dispenser** in the fridge door becomes a great ally in your daily life, plus it features extra storage capacity in the cooler.

## Fresh food for longer

**LongLife No Frost** technology maintains the right humidity level inside the fridge thanks to its independent refrigeration systems. It prevents odour contamination, ice buildup, and frost inside.

## 90° Opening door

Drawers can be fully extended when the doors are opened at 90°, making cleaning and removal easier.

## Better refrigeration

Benefit from pure physics with **MetalCooling** technology. A metal sheet on the back keeps cold even when opening and closing the door constantly, thanks to its high thermal conductivity. Cold air goes through the sides to the metallic area on the back to distribute the low temperature evenly inside the fridge.

## Perfect temperature

Set the temperature in each fridge area to maintain all the nutrients and properties of fruit, vegetables, drinks, and refrigerated food.

You have several options available:

- The **Super Fridge** (2°C) and **Super Freezer** (-23°C) prevent temperature loss when placing food with higher temperatures inside.
- You can choose the ideal temperature for each drink in the wine cooler area: **Champagne** (5-8°C), **White wine** (9-12°C), and **Red wine** (13-16°C).
- **Smart Mode**: the fridge temperature adjusts to 4°C, the freezer to -18°C, and the wine cooler to 12°C automatically.
