CUTTING EDGE DESIGN

Minimalist design with a glass finish that gives a touch of functional exclusivity to your kitchen.

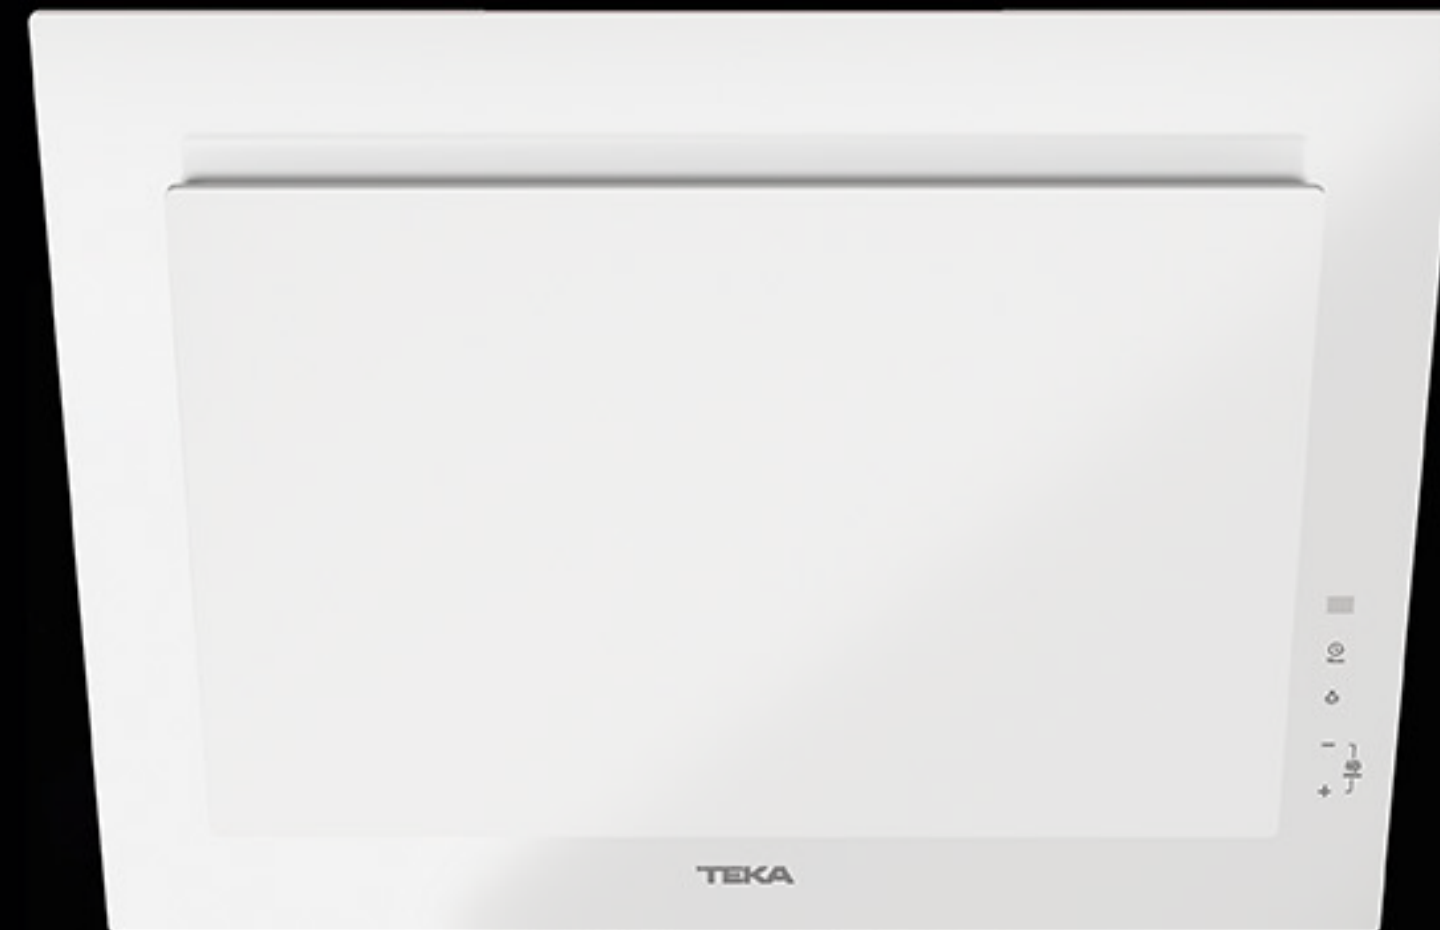

Its lines create an exclusive style, integrating into the environment in a clean and uniform way.

This new design will make you enjoy not only its exceptional functions, but a modern and pleasant space in your kitchen.

MORE VERSATILE

Installation with or without coverings. With recirculation or with outside extraction.

All the options you need in this wide range, where each model integrates into your kitchen like a small piece of art. Additionally, DVT models include a drilling guide for the wall, and parts pre-assembled from the factory, for a much easier and faster installation.

A BREATH OF FRESH AIR IN YOUR KITCHEN

LATEST GENERATION MOTORS

More Silence, more extraction and with minimal consumption.

More efficient motors, which provide energy savings, greater durability and less noise.

The **extra silent Brushless motor** gives us minimum noise levels of up to 39db, equivalent to the noise of a whispered conversation. Moreover, these extra silent motors provide high durability thanks to their robust design.

The addition of an extra filter improves the extraction and odour removal, by combining front and perimeter extraction with the **Dual Aspiration System**.

FEEL THE FRESHNESS

Renovate the air in your kitchen with the Fresh Air function for a clean and fresh environment.

It renews air for 24 hours in cycles of 10 minutes per hour. An ideal function for meetings at home, as it allows you to get rid of annoying odours, always keeping your home fresh.

Your home free of odours with the new latest generation regenerative* filters. Eliminates up to 95% of odours for approximately three years.

*Optional filters for recirculation installation.

DESIGNED TO SAVE

With energy ratings up to A +++.

Meeting the energy criteria for Passive House homes, our hoods allow recirculating installation, avoiding the need for air vents to the outside which favours the isolation method. In this way, it is possible to reduce the energy needed for the air conditioning in your home.

Efficiency and savings guarantee with LED lighting. Light right where you need it with **adjustment lamps** directly in the cooking area. You can also **adjust the intensity** of the light as you like.

EASY USE AND CLEANING

Access your hood filters in the easiest way for a quick and easy clean.

Thanks to the pistons, the glass remains open, thus improving security while cleaning.

Get impeccable cleaning results with the additional removable tray. It's as easy as taking it out and putting it in the dishwasher for a deep clean.

The control panel is fully integrated into the glass, so, in addition to an intuitive design, it makes it easier to clean.
