BELLOTA

NEW FLEX SOLE

1 MAXIMUM FLEXIBILITY:
Multi-channel outsole design, with a distribution of small studs that generates multiple flex areas: maximum flexibility.

2 SHOCK ABSORPTION:
The vertical channels in the outsole have a bellows effect on the heel, allowing the material to compress and absorbing 50% of the shock energy.

3 LIGHTNESS:
Composed of double density polyurethane with Open Cell technology, which consists of injecting PU with micro air particles to make the sole lighter.

NEW COMFORT + INSOLE

Open cell polyurethane foam insole, with elastic memory to ensure cushioning and, in addition, a thicker heel to relieve stress/load on the Achilles heel and arch of the foot.

COMFORTABLE
LIGHTWEIGHT
FLEXIBLE

Wear your shoes
all day without any
discomfort; you'll
even forget you have
them on!

Footwear that
meets the
requirements
of users.

FLEX RANGE

SO FLEXIBLE THAT IT ADAPTS TO BOTH MEN'S AND WOMEN'S FEET

Men's and women's feet are different.

That's why we are expanding our Flex range with an exclusive model just for women.
