

USER MANUAL

ART 5W/GTWIN MONITOR

INTRODUCTION

First of all, we thank and congratulate you for purchasing this product manufactured by Golmar.

Our commitment to achieving the satisfaction of customers like you is manifested through our ISO-9001 certification and the manufacture of products like the one you have just purchased.

Its advanced technology and strict quality control will ensure that customers and users enjoy the numerous features that this device offers. To get the most out of them and ensure proper operation from day one, we recommend that you read this instruction manual.

SAFETY PRECAUTIONS

- Avoid overtightening the screws of the monitor connector.
- **Always disconnect the power supply** before installing or making modifications to the device.
- The fitting and handling of these devices must be carried out by **authorised personnel**.
- All of the wiring must run at least **40cm away from any other wiring**.
- Install the monitor in a dry protected location free from the risk of dripping or splashing water.
- Do not place in humid, dusty or smoky locations, or near sources of heat.
- Before connecting the device to the mains, check the connections between the door panel, power supply, distributors and monitors.
- Always follow the instructions contained in this manual.

CHARACTERISTICS

- Monitor for Gtwin installation.
- 5" TFT colour screen.
- Wi-Fi transmission monitor to call transfer to mobile smartphone. **Only the master monitor can activate Wi-Fi transmission.** (power supply unit 1723/22 required for apartment if there are more than 24 monitors with WiFi always active in the building, see 28 to 31 and 34 pages).
- **Any additional slave ART 5W monitor**, must be powered with the local power supply unit "1723/22" and configured in "Local power mode" (see page 28 and 32).
- Monitor with simple installation (non-polarised 2 wire BUS).
- Function and programming access buttons (customise monitor functions).
- Completely private conversation and image.
- Auto-spy function.
- 'Doctor mode' function (automatic door opening
- "Do not disturb" mode function.
- Intercom between two devices in the same apartment (programmable).
- Intercom between two devices in different apartments (programmable).
- "HZ" input for calls from apartment front door.
- Call volume control (maximum, medium and minimum.)
- Output to auxiliary call repeater.
- Different ringtones to identify call origin: Main door panel, slave door panel, intercom and interior door of the apartment.
- Adjustments on screen display: brightness, contrast, colour and communication volume.
- Allow communication in 'Push-to-talk' mode or ermite modo de funcionamiento "pulsar para hablar" o "manos libres".
- SW1 configuration switch **CODE**: Dip2 to Dip8 to set the monitor address "call (user) code".
- SW2 configuration switch **INT**: to set the monitor as master / slave 1, slave 2 or slave 3.
- JP3 jumper(end of line).
- Push Button for activating the main door release and push button for activating the secondary door release.
- Notification leds.

SYSTEM OPERATION

- To make a call, the visitor needs to press the button for the apartment, an audible tone indicates that the call is being made and LED  on the door panel illuminates. At this moment, the apartment's monitor(s) receives the call. If the visitor presses the button for another apartment by mistake, the call can be cancelled by pressing the button for the correct apartment.
- In systems with several access doors, the other door panel(s) will automatically disconnect; if another visitor wishes to call, LED  on the door panel will blink for 3 seconds. If the vocal synthesis module is installed on the door panel, the message 'communicating' will indicate that the channel is busy.
- General panels (main): If the call is being made from the general panel, the interior panel of the building being called and other possible general panels automatically disconnect; if another visitor attempts to call from either a busy interior panel, an audible tone will indicate that the channel is busy and LED  of the door panel will blink for 3 seconds, or from another general panel, an audible tone will indicate that the channel is busy and LED  of the general panel will blink for 3 seconds. The door panels of the other interior buildings will remain free to be used.
- General panels (main): If the call is made from an interior panel, the other interior panels will remain free to be used. It is only possible to make calls to interior buildings from the general panels when their door panels are not in use; if an attempt is made to make a call to a busy interior panel, an audible tone will indicate that the channel is busy and LED  of the general panel will blink for 3 seconds.
- The call lasts for 60 seconds, during which time an image appears on the apartment's master monitor after the call is received without the visitor knowing, and the indicator LED and status LED  of the master and slave monitor(s) will illuminate (green). To view the image on a slave monitor, press button  and the image disappears from the monitor that was displaying it. If the call is not answered within 60 seconds, the indicator LED and status LED  of the master and slave monitor(s) will turn off. LED  on the door panel will turn off and the channel will become free.
- To establish communication, press button  of the monitor, status LED  will blink (green), LED  of the door panel will then illuminate and LED  of the door panel will turn off.
- Guaranteed communication time is 90 seconds (configurable); after 90 seconds of guaranteed communication time, the channel will become free.
- To end communication, press button , and the monitor's indicator LED and status LED  and door panel LED  will turn off and the channel will become free.
- To open the main or secondary door, press the corresponding button /  during the call or communication processes: one press will activate the lock release for 1 second (configurable main door) and, with the opening of the main door, LED  will also illuminate for 1 second.
- A description of the function buttons can be found on p. 5.

MONITOR DESCRIPTION

Description of the ART 5W/Gtwin monitor:

Hands-free monitor for the GTWIN system with button and coded panels.

- a. Speaker.
- b. 5" TFT colour screen.
- c. During call reception and communication processes, it enables the main lock release to be activated.
- d. With the monitor in standby mode: one short press it activates/ deactivates the "do not disturb" mode and the indicator led will illuminate (red). One press by 3 seconds it activates / deactivates the "do not disturb" mode during 8 hours and the indicator led will blink (red).
- e. During a call, communication or auto-spy process: it enables the secondary door release to be activated: one press will activate the door release for 1 second.
- f. Scroll push buttons for configuration menu.
- g. Up to 32 video calls stored in monitor memory. Allows to copy these video calls to a micro SD slot (not included). Type: Micro SD Class 10 from 4GB to 128 GB.
- h. Start/ stop communication push button. With monitor in standby, it allows the intercom.
- i. Raised marks for the visually impaired users, orients the "door opening" button and the "start / end communication" button.
- j. Access to configuration and function menu: With monitor in standby 2 short press to access to configuration menu or 1 press to access the function push buttons.
- k. Function push buttons.
- l. Microphone.
- m. Connector fixings.
- n. Configuration jumpers.
- o. Connection terminals.

Description of the connection terminals

LINE IN	LINE OUT	NC	CP
---------	----------	----	----

LINE IN: Communication bus input monitor (non-polarised).

LINE OUT: Communication bus output to additional monitor/ telephone (non-polarised).

NC: Do not connect, without use.

CP: Door bell button input.

S+	S-	V+	V-
----	----	----	----

S+/S-: Output (open normally contact "N.O") to auxiliary call repeater SAV-GTWIN.

V+: Input (positive) external power supply "1723/22".

V-: Input (negative) external power supply "1723/22".

MONITOR DESCRIPTION

Description of the configuration jumpers:

(*) JP1

Monitor with JP1 jumper place to right, takes the current from system power supply **(factory default)**.

Monitor with JP1 jumper place to left, takes the current from dedicated power supply "1723/22".

(*) JP2

Monitor with JP2 jumper place to left, low power **(factory default)**.

Monitor with JP2 jumper place to right (High power) with use of dedicated power supply "1723/22".

(*) JP3

Monitor with JP3 jumper place to left, has the end of line connected **(factory default)**.

Monitor with JP3 jumper place to right, has the end of line disconnected.

(*) Factory default.

Function push buttons:

Monitor in standby mode: one short press it activates/ desactivates the "do not disturb" mode and the indicator led will illuminate (red). One press by 3 seconds it activates / desactivates the "do not disturb" mode during 8 hours and the indicator led will blink (red).

Monitor in standby mode: allows you to display the image from the main door panel, press the button  once, then press the button  (if the channel is busy, short acoustic tones on the monitor will indicate it), if the button  is pressed again, the image of the secondary door panel will be displayed, in carousel mode. Then, if you press the button , you can establish audio and video communication with the selected door panel.

During a call process: it allows the secondary monitors (in the same apartment) to capture the door panel image, with the image of the monitor that was displaying it disappearing.

Monitor in standby mode: it allows the intercom between 2 monitors of the same or different apartment (this function must be programmed previously, (see pages 15-18)). Press the button , then press the button  and select the apartment or a monitor in your apartment to be called with the help of the push buttons  /  & confirm with the push button .

During call reception and communication or auto-spy processes, it enables the main lock release to be activated.

During call reception and communication or auto-spy processes, it enables the secondary lock release to be activated, one press will activate the door release for 1 second.

Access to the configuration menu and function buttons: when the monitor is in standby mode 2 presses accesses the configuration menu or 1 press accesses function buttons.

MONITOR DESCRIPTION

Establishing communication in 'Push-to-talk' mode by pressing button

To select this operating mode, see page 13 to activate the "Push to talk" mode.

When receiving a call, press button  to establish communication, the notification icon of the monitor will blink (green colour); if button  is pressed and held down the audio channel to the panel is activated and you can talk to the caller. To listen on the monitor, release button .

To end the conversation, press button .

Adjustments on screen display:

With the monitor in auto switch-on, call or communication: allows to enter/exit the **"adjustments on screen display"** (brightness, contrast, colour and communication volume). A short press on the button  to enter/ exit the "adjustments on screen display", an OSD menu will appear showing the brightness, contrast, colour and communication volume options, this last option only with the monitor in communication with the door panel. Press the / buttons to scroll down or up respectively through the menu options and press the / buttons to make adjustments.

Door panel call screen

Door panel communication screen

MONITOR SETTINGS

SW1 configuration switch:

The **SW1** configuration switch is located at the back of the monitor.

Dip1: Defines the WiFi operating mode on the monitor. **ON** "WiFi always active" and **OFF** "WiFi active after call forwarding" (the GCall app will have a delay of 10 seconds for the call forwarding reception). **Important:** for system types, limits on the number of ART 5W monitors with WiFi always active (call forwarding without delay) or with WiFi active after call forwarding (10 sec. delay), see pages 28-32 and 34.

Dip2 to Dip8: To configure the desired code (2 = most significant bit and 8 = least significant bit).

CODE: User code.

Set a number from 0 to 126, respecting the following rules:

- In the column/riser, there should not be different apartments with the same user code.
- In the case of monitors/telephones in parallel in the same apartment, these must have the same user code.

SW1 SWITCH:

Continued from previous page.

(*)Factory setting.

MONITOR SETTINGS

SW2 "INT" configuration switch:

The **INT** configuration switch is located at the back of the monitor. It enables the monitor to be configured as master/slave.

INT: Internal code of the monitor/telephone to set as master/slave.

Set the monitor/telephone as master, slave 1, slave 2 or slave 3 using the **INT** switch with a code from 0 to 3 respectively. Taking into account the following points:

- In the case of a single monitor/telephone in the apartment, the code to be set will always be 0.
- In apartments, up to 4 monitors/telephones can be connected in parallel, all with the same user code but with different internal monitor/telephone code.
- The internal code identifies each of the monitors/telephones in the same apartment. This enables intercom calls to be made to a specific monitor/telephone in the same apartment. In the case of intercom calls to different apartments, and in the case of calls coming from door panels and from apartment front doors, all of the monitors/telephones in the apartment always sound. The following considerations must also be borne in mind:
- When master monitor/telephone 0 receives a call, it sounds immediately and slave monitors/telephones 1, 2 and 3 sound in succession, one after the other.
- If a call is made from a video door entry panel, master monitor 0 shows the image of the door panel. During the call time (60 seconds) and before establishing communication, the other slave monitors in the same apartment can capture the image of the door panel if button is pressed, causing the image on the monitor that was displaying it to disappear.

INT SWITCH:

(*) Factory setting.

JP3 end of line jumper:

JP3 end of line jumper, is located at the back of the monitor. Leave the JP3 jumper inserted on the left on those monitors where the bus cable end. Insert the jumper JP3 to the right only on the intermediate monitors.

JP3

Leave the JP3 jumper inserted on the left on those monitors where the bus cable end (end of line connected).

JP3

Insert the jumper JP3 to the right only on the intermediate monitors. (end of line disconnected).

INSTALLING THE MONITOR IN A WALL MOUNTING CONNECTOR

Avoid dusty or smoky environments or locations near sources of heat.

Positioning the wall mounting connector:

The top of the connector must be positioned at a height of 1.60m. The minimum distance between the sides of the connector and the closest object must be 5cm.

Fixing the monitor's wall mounting connector to the wall:

Fix the monitor's wall mounting connector to the wall by drilling two 6mm diameter holes and using the screws and plugs supplied with the terminal.

Positioning the monitor:

Connect the cables to the monitor (see p. 4), position the monitor in front of the wall mounting connector, ensuring that the holes in the base of the monitor line up with those on the connector ①, and then move the monitor downwards ② until the monitor is securely fixed to the connector ③.

Remember to remove the protective covering from the front of the monitor once installation is complete.

INSTALLING THE MONITOR IN AN EMBEDDING BOX

Avoid dusty or smoky environments or locations near sources of heat.

Location of the embedding box:

Make a hole in the wall to position the top of the universal embedding box at a height of 1.60 m from the ground. The minimum distance between the sides of the embedding box and the closest object must be 5cm.

Positioning the embedding box and fitting the wall mounting connector:

Pass the cable through the hole made in the embedding box. Embed the box and ensure that it is level and flush. Fix the wall mounting connector of the monitor to the embedding box with the screws supplied.

Positioning the monitor:

Connect the cables to the monitor (see p. 4), position the monitor in front of the wall mounting connector, ensuring that the holes in the base of the monitor line up with those on the connector ①, and then move the monitor downwards ② until the monitor is securely fixed to the connector ③.

Remember to remove the protective covering from the front of the monitor once installation is complete.

MAIN MENU

The main menu allows you to modify the monitor's default settings:

Main menu

If the device is in standby (screen switched off), to access the main menu, press twice the button . Press the / & / buttons to scroll through the function icons. Then press the button to activate/deactivate or access the selected function and press the button to exit the selected function and return to the main menu. The equipment will return to the idle state after 25 seconds of inactivity or by pressing the button once.

Activate/deactivate the "do not disturb" mode function from the front of the monitor and at rest by pressing the button once, when the function is activated, the led on the button will light up steady (red). A 3 second press activates/deactivates the "do not disturb" mode for 8 hours and the led of the button will flash (red).

The "automatic door opening" function (master monitor only) allows the door to be opened automatically 3 seconds after a call is made from the panel without the need to answer the call. Position yourself on the function icon with the help of the buttons / and / press the push-button to activate or deactivate the function.

This multifunction icon (master monitor only) allows you to activate/deactivate the "call forwarding" mode (previously configured, see pages 23 to 25) or to activate/deactivate the "automatic video recording" function. Note: the "call forwarding" mode deactivates the "automatic video recording" function. Position the cursor on the function icon using the buttons / / / and press the button to activate or deactivate the call forwarding function or activate the "automatic video recording" function, the video recording (lasting 10 seconds) is started when a call is made to the home.

Allows you to view the recorded call videos (maximum 32 videos, master monitor only), position on the function icon using the buttons / and / and press the button to access and play back the saved videos, press the button to exit and return to the main menu. It also allows you to delete the call videos one by one or all at once. Note: from the settings menu, you can export the call videos (see pages 4, 23-25) to a microSD memory card. The led of the button on the front of the monitor (in standby) will flash (green) and in the main menu the function icon with a red dot will indicate that there are videos pending to be viewed.

No function

To change the language of the monitor, go to the function icon using the buttons / and / and press the button to access and select the desired language using the / buttons, then press the button to confirm the selection. To exit without changing and return to the main menu, press the button .

Allows you to clean the screen by temporarily (30 seconds) overriding the buttons on the front of the monitor. This option is useful to avoid unintentionally activating the monitor functions when you want to clean the screen. Place yourself on the function icon with the help of the buttons / and / and press the button to activate the "clean screen" function for 30 seconds, once this time has elapsed, the monitor returns to the main menu. Note: If the "clear screen" function is activated when a call is received, the function is deactivated to allow the call to be answered.

To access the settings menu: Position yourself on the function icon using the buttons / and / and press the button .

SETTINGS MENU (ADVANCED PROGRAMMING)

The settings menu allows you to modify the monitor's default settings:

If the equipment is in standby mode (screen off), to access the main menu, press the button $\equiv$ twice. Use the $\triangleleft/\triangleright$ & $\nabla/\triangle$ buttons to move to the function icon . Then press the button  to access the settings menu, see page 12.

AUDIO: In the settings menu, select "Audio" to adjust the audio volumes of the monitor, using the $\nabla/\triangle$ buttons. button, press the button  to access the audio settings. To exit and return to the settings menu, press the push button .

Push buttons: $\nabla/\triangle$ select the parameter to be changed. When the last parameter is selected, pressing ∇ will take you to screen 2/2.

Push buttons: $\triangleleft/\triangleright$ once a parameter has been selected, you can adjust its value.

At the end of the configuration, press the push button  to confirm and return to the settings menu.

Settings menu

To select the options to be configured, use the buttons Δ/∇ and the button  to access the selected option. At the end of the configuration, press the push button  to exit and return to the settings menu. **Note:** Configure the sending of calls only on the master monitor of the apartment.

Configure "Call Forwarding" screen

Configure "Call Forwarding" screen

-Important: To enable this function it is necessary to have a router that ensures the access of the master monitor with the "call forwarding" function configured and Wifi enabled.

-The call forwarding function allows sending a video and audio call to an Android or iOS smartphone.

-On the smartphone, connected to the internet with its own data connection or WiFi, you must install the "Golmar Gcall" app to be able to receive the call.

-Remember: The "call forwarding" mode disables the "automatic video recording" function.

Continued from previous page.

SETTINGS MENU

Associate the Golmar Gcall App with the apartment's master monitor:

Select the option  using the buttons ∇ / Δ and press the button  to enter. After a few seconds the monitor will go into configuration mode and the following screen will be displayed.

Configure "Call Forwarding" screen

Configuration mode screen

To configure the call forwarding function, see "Golmar Gcall" manual & "Golmar Gcall Configurator". Once the configuration is complete, press the button  to return to the main menu screen. The following icon  will be displayed in the main menu to indicate that the call forwarding function is active on the monitor. When the function  is active and a call is received from the panel in the apartment, it will be received by the monitor(s) and smartphones on which the Golmar Gcall App is installed and configured.

GENERAL DESCRIPTION TYPE OF INSTALLATION BUILDING/CONDOMINIUM (1 BUILDING)

The following describes the function depending on the configuration of the jumpers JP1 , JP2 and DIP1 of the microswitch SW1 (see page 5 and 7).

	Installation typeTipo de instalación		
Performance	Buiding (Default) (Power supply from system with WiFi always active)	Condominium (Power supply from system BUS with WiFi active after call forwarding)	Local power (Power supply from local power supply unit)
Jumper and Dip-switches	JP1  JP2  SW1 n.1 	JP1  JP2  SW1 n.1 	JP1  JP2  SW1 n.1 

IMPORTANT: Any additional slave ART 5W monitor, must be powered with the local power supply unit "1723/22" and configured in "Local power mode" (see page 28 and 32).

TYPES OF SYSTEM

Buiding with 1 main access and 1 column (without multiplexer)

Buiding with 2 main accesses or 1 main and 1 secondary, maximum 4 columns (MC-Gtwin column multiplexer)

Continued from previous page.

Building with 4 main accesses and maximum 4 columns (1 DPM-Gtwin panel multiplexer)

Continued from previous page.

INSTALLATION LIMITS OF ART 5W/GTWIN MONITOR WITH VIDEO DISTRIBUTORS

The maximum number of ART 5W/GTWIN monitors in a column /riser with video distributors is described below depending on the type of installation "Building or Condominium" with the same maximum distances.

A = Distance between the D4L-Gtwin distributor and monitor/telephone.

Bv = Distance between the device (FA-Gtwin, MC-Gtwin or DPM-Gtwin) where the column/riser is connected and the furthest D4L-Gtwin distributor.

Systems with FA-Gtwin power supply

Type of systems

A	Column connected in: "FA-Gtwin" power supply with 1 access panel. or in 1 "DPM-Gtwin" access panel (powered by FA-Gtwin) with maximum 4 access panel.
B	Column connected in a "MC-Gtwin" column multiplexer (powered by "FA-Gtwin") with up to two access panel.

	No. of apartment ART 5W/Gtwin monitors					distance		
	ART 5W with FA: "1723/22" (WiFi always active)	Building (Default) (Power supply from system BUS with WiFi always active)		Condominium (Power supply from system BUS with WiFi active after call forwarding)		A	Bv	A+Bv
System type	A - B	A	B	A	B			
Cable								
RAP-GTWIN (for new installations)	127	24	16	100	72	50m	200m	200m
Ø 0,6mm telephone pair without sheath	64	14	12	64	56	50m	150m	150m
CAT5 UTP (one twisted pair)	64	10	8	36	32	50m	125m	125m
HVV05-F 1,5 mm ² rubber covered	127	24	16	100	80	50m	125m	125m
1 mm ² section single cable	32	24	16	100	60	50m	50m	75m

LÍMITES DE INSTALACIÓN DEL MONITOR ART 5W/GTWIN SIN DISTRIBUIDORES DE VIDEO EN (IN-OUT)

The maximum number of ART 5W/GTWIN monitors in a column /riser without video distributors in (in-out) is described below depending on the type of installation "Building or Condominium" with the same maximum distances.

See table below: the type of system, the cable used and the max. no. of monitors/phones. per column / riser (Building).

Please note: Installation without distributors (IN-OUT), max. 32 monitors / telephones per column / riser (Building).

Bv = Distance between the device (FA-Gtwin, MC-Gtwin o DPM-Gtwin) where the column/riser is connected and the furthest monitor / telephone.

Systems with FA-Gtwin power supply

Type of systems

A	Column connected in: "FA-Gtwin" power supply with 1 access panel. or in 1 "DPM-Gtwin" access panel (powered by FA-Gtwin) with maximum 4 access panel.
B	Column connected in a "MC-Gtwin" column multiplexer (powered by "FA-Gtwin") with up to two access panel.

	No. of apartment ART 5W/Gtwin monitors					distance
	ART 5W with FA: "1723/22" (WiFi always active)	Building (Default) (Power supply from system BUS with WiFi always active)		Condominium (Power supply from system BUS with WiFi active after call forwarding)		Bv
System type	A - B	A	B	A	B	
Cable						
RAP-GTWIN (for new installations)	32	24	16	32	32	200m
Ø 0,6mm telephone pair without sheath	32	14	12	32	32	190m
CAT5 UTP (one twisted pair)	32	10	8	24	20	190m
HVV05-F 1,5 mm ² rubber covered	32	24	16	32	32	150m
1 mm ² section single cable	32	24	16	32	32	100m

Monitors in parallel (input/output) from a bypass of the D4L-Gtwin distributor: Max. connection 4 monitors in one apartment.

Note: All monitors must have the same apartment call code. The internal code of the Master monitor must be equal to 0.

The ART 5W/Gtwin monitor features as standard the ability to receive calls from the apartment front door. This feature precludes the need to use the bell by positioning a button between the 'CP' terminals of the monitor. The ringtones vary depending on where the call is being made from, enabling the user to identify its origin. If a call is made from the apartment front door during a conversation with the door panel, the monitor will emit a number of tones to indicate so.

Continued from previous page.

OPTIONAL CONNECTIONS

Additional call repeater (SAV-GTWIN tritonal call repeater required):

Note: If the monitor where the additional call repeater is connected has no ringtone ("do not disturb" mode), the call repeater will play the ringtones from "CP" push button, see page 32.

Configuration of the SAV-GTWIN tritonal call repeater:

Place a 9 V battery (type MN1604/6LR61) inside the call repeater. The call repeater features 3 configuration jumpers marked as W1, W2 and W3 for selecting the type of sound (triple tone, double tone or single tone), as shown in the following table:

TYPE OF SOUND	JUMPER			
	W1	W2	W3	
(*) TRIPLE TONE	X	X	X	all jumpers fitted
DOUBLE TONE	X		X	only the W2 jumper is removed
SINGLE TONE		X	X	only the W1 jumper is removed

(*) Factory setting.

Additional call repeater with SAR-12/18 relay unit in monitor.

A building with 1 column of up to 127 WiFi activated monitors, a 1723/22 transformer connected to each of the ART 5W monitors and 1 video main panel (push buttons).

CLEANING THE MONITOR

- Do not use solvents, detergents or cleaning products that contain acids, vinegar or abrasive components.
- Use a soft damp lint-free cloth with water.
- Always wipe the monitor in the same direction, from top to bottom.
- After cleaning the monitor, remove any moisture with a soft dry lint-free cloth.
- **Reminder:** Use the function  "clear screen" in the main menu of the monitor (see page 12). It temporarily (30 seconds) overrides the push buttons on the front of the monitor. If the "clear screen" function is activated when a call is received, the monitor exits the "clear screen" function to allow the call to be answered.

CONFORMIDAD

Este producto es conforme con las disposiciones de las Directivas Europeas aplicables respecto a Equipos de Radio **2014/53/CEE** y la Compatibilidad Electromagnética **2014/30/CEE**.

*This product meets the essentials requirements of applicable European Directives regarding Radio Equipment **2014/53/ECC** and Electromagnetic Compatibility **2014/30/ECC**.*

NOTA: El funcionamiento de este equipo está sujeto a las siguientes condiciones:

(1) Este dispositivo no puede provocar interferencias dañinas, y (2) debe aceptar cualquier interferencia recibida, incluyendo las que pueden provocar un funcionamiento no deseado.

NOTE: Operation is subject to the following conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any received interference, including the ones that may cause undesired operation.
