

HEATING

HEATER ACCESSORIES

The heater accessories joined with the valves and the lockshield valves complement all the necessary components to ensure the correct functioning of a heater system.

These accessories can be **traps** to eliminate the air inside the heating system, **plugs**, **reducers** to adapt to the diameter of the trap, **sockets** to join radiator modules, **supports** to fix the radiator to the wall and **gaskets** for the threaded union of the reducer. Some accessories are grouped in kits with a selection of the most important accessories for a heater.
