

CONTROL AND SECURITY

MANOMETER

A manometer is an analogic indicator used for measuring the pressure of a gas or liquid.

The principal of functioning of all the **manometers** is based in the deformation of one sensible element of the pressure and the transmission of this deformation to the mechanism acting on the indicator needle.

Standard Hidráulica offers a kind of pressure gauge with lower connection and another kind with back connection.

Manometer with lower connection

Code	Ø	Connection
41023	50	1/4"

Manometer with back connection

Code	Ø	Connection
41024	50	1/4"

TECHNICAL CHARACTERISTICS	
Units	bar
Measurement range	1-10 bar
Thread	Brass
Ball	Aluminium
Visualization screen	Methacrylate
Box	ABS black
