Note 1: Ambient temperature=25°C±2°C

Note 2: To be measured in the dark room with backlight unit.

Note 3: To be measured at the center area of panel with a viewing cone of 1 by Topcon luminance meter BM-7A, after 10 minutes operation (module).

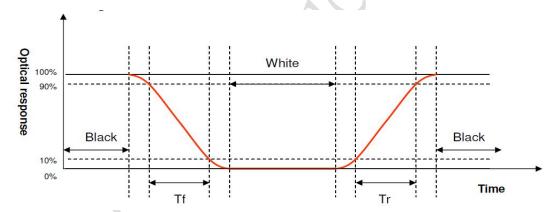

**Note 4: Definition of response time:** 

The output signals of photo detector are measured when the input signals are changed from "black" to "white" (rising time) and from "white" to "black" (falling time), respectively. The response time is defined as the time interval between the 10% and 90% of amplitudes.

Refer to figure as below.

Note 5. Definition of contrast ratio:

Contrast ratio is calculated with the following formula:

Note 6. Definition of viewing angle

Viewing angle is the angle at which the contrast ratio is greater than 10 for TFT module. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface.

Lv = Average Surface Luminance with all white pixels (P1, P2, P3, P4, P5)

# 13. Reliability Test

This standard reliability test is done only for the first lot of MP products.

Customer and supplier must hold a discussion if other reliability test is requested by customer.

If there is any abnormality, the normal temperature and humidity recovery 2 hours after the display is OK, the result is judged as OK.

#### 15. Precautions for Operation and Storage

#### 1. Precautions for Operation

- (1)Since LCD panel made of glass,in order to prevent from glass broken or color tone change,please do not apply any mechanical shock or impact or excessive force to it when installing the LCD module.
- (2)If LCD panel is broken and liquid crystal substance leaks out and contact your skin or clothes, please immediately wash it off by using soap and water.
- (3)The polarizer on the LCD surface is soft and easily scratched. Please be careful when handling.
- (4)If LCD surface becomes contaminated, please wipe it off gently by using mois ten soft cloth with normal hexane, do not use acetone, ketone, ethanol, alcohol or water. If there is saliva or water on the LCD surface, please wipe it off immediate ly.
- (5) When handing LCD module, please be sure that the body and the tools are properly grounded. And do not touch I/F pins with bare hands or contaminate I/F pins.
- (6)Do not attempt to disassemble or process the LCD module.
- (7)LCD module should be used under recommended operating conditions shown in chapter 6 and 7.
- (8)Response time will be extremely slower at lower temperature than at specified temperature and LCD will show different color when at higher temperature. The phenomenon will disappear when returning to specified condition.
- (9)Foggy dew,moisture condensation or water droplets deposited on surface and contact terminals will cause polarizer stain or damage,the deteriorated display quality and electrochemical reaction then leads to the shorter life time and permanent damage to the module probably. Please pay attention to the environmental temperature and humidity.

#### 1. Precautions for Storage

- (1)Please store LCD module in a dark place, avoid exposure to sunlight, the light of fluorescent lamp or any ultraviolet ray.
- (2)Keep the environment temperature at between  $10^{\circ}$ C and  $35^{\circ}$ C and at normal humidity. Avoid high temperature, high humidity or temperature

below  $0^{\circ}$ C.

- (3)That keeps the LCD modules stored in the container shipped from supplier be fore using them is recommended.
- (4)Do not leave any article on the LCD module surface for an extended period of time.

#### 2. Warranty period

Warrants for a period of 12 Months from the shipping date when stored or used under normal condition.
