SOUND WITH SOUL

True beauty is also on the inside

It's easy to be amazed by the infrastructure of this new building. That's only because you haven't discover yet what's inside.

Words cannot do justice to the impressive architecture of the new executive building of the State Tax Service of the Ministry of Economy of Azerbaijan. Formed by five cubic structures of different sizes that rest on a podium base featuring a 400-seat auditorium, a boardroom, a cafeteria and a 60-foot-high winter garden space, the building rises majestically right on the main avenue of the capital, Baku, which is named after Heydar Aliyev.

The four modules, which comprise a total height of 31 stories, are sectioned by green spaces. Construction was carried out by optimizing orientation and maximizing solar exposure, rotating a total of 40 degrees from the base to the top. The tower includes offices, a restaurant and private suites, and is crowned by a spectacular rooftop garden, which offers breathtaking views of the city. But while the view from this magnificent building is one of its most striking features, so are its acoustics: thanks to PROAV LLV and DAS Audio systems, the professional sound of the auditorium and the aesthetic power of the building are a match made in heaven.

Serving as the base for the four modules that reach for the sky, the building boasts a 400-seat multipurpose auditorium. PROAV LLV was contracted to carry out the sound installation at this location, and their choice

was instantly clear. The DAS Audio systems would be responsible for providing a sound in line with the majesty of the venue.

To achieve the required intelligibility and sound throughout the installation,

PROAV LLV opted for 16 units of EVENT-208A, a lightweight, self-powered 3-way system with high-end DSP components and an Easy-DSP™ configuration system. The sound quality offered by this system as well as its versatility and ease of configuration made it the ideal choice, providing sound for any type of event hosted in the auditorium, from conferences to concerts of any kind. In addition to these systems, 2 more EVENT-218A units were used for the low frequencies, offering an unbeatable final sound quality.

To round off the perfect combination for exceptional acoustics in the auditorium, both for the audience and the people on stage, PROAV LLV also deployed 4 units of VANTEC-12A, a multi-purpose system with floor monitor position.

Systems deployed:

x16 **EVENT-208A**

x2 **AX-EV208**

x2 **EVENT-218A**

x4 **VANTEC-12A**

The results of the installation are exceptional. PROAV LLV was also commissioned to install the stage lighting system, the public address system, the AV system, the conference and interpretation system and all the AV systems in the meeting rooms on the different floors. The choice of DAS Audio for this project evidently confirms that the reliability, sound quality and performance of our systems are up to any challenge. And that they are the ideal choice to make any building stand out, not only from the outside.
